The global High Frequency Polypectomy Snares market size is predicted to grow from US\$ 105 million in 2025 to US\$ 129 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

High-frequency polypectomy snares typically refer to electric/thermal snares, used in conjunction with endoscopes and high-frequency electric generators. They work by encircling the lesion with a metal snare, tightening it, and then applying electricity to cut and coagulate the polyps for hemostasis, used for the removal of polyps in the digestive tract.

Upstream: Medical-grade stainless steel/braided wire, insulating sheath (PTFE, etc.), plastic handle parts, connecting cables and plugs, sterilization and aseptic packaging materials. Downstream: Digestive endoscopy centers/hospitals and third-party endoscopy institutions, for colorectal screening and EMR treatments. In 2025, the global price of high-frequency polyp removal probes will be \$9.5 per unit, with sales of 11.25 million units and a global annual production capacity of 11.3 million units. The industry profit margin is 25-30%.

Global Market Future Development Trends:

Expanded Screening Drives Demand: Increased colorectal cancer screening and endoscopy volume, coupled with AI-assisted detection improving detection rates, are driving a long-term upward trend in the demand for polyp removal consumables. The market is placing greater emphasis on stable supply and cost control.

Surgical Technique Shifts Reshaping Product Structure: Guidelines and research are

promoting the use of cold snares for polyps ≥ 10 mm to reduce the risk of thermal damage. High-frequency (thermal) snares still hold a key position in larger cases requiring coagulation hemostasis or combined with EMR. Manufacturers will strengthen the cutting/coagulation balance and operational feel.

Disposable and Platform-Based Acceleration: Infection control and turnover efficiency are driving the penetration of disposable snares. Simultaneously, there is a greater emphasis on compatibility with mainstream high-frequency electrocautery generators, reliable cable connections, traceable barcodes, and bundled packages (snare + injection needle + clamp) to serve high-throughput scenarios in ASC/day surgery.
