Hot melt adhesive for technical textiles is a type of thermoplastic adhesive used to bond fabrics and other textile materials in industrial applications. These adhesives are solid at room temperature but melt when heated, allowing for strong, flexible, and durable bonding without the need for solvents or water. They are widely used in automotive, medical, protective clothing, filtration, and upholstery industries due to their fast curing time, resistance to washing and chemicals, and ability to bond different types of textiles, including nonwovens and coated fabrics. Common formulations include polyurethane (TPU), polyester (PES), polyamide (PA), and ethylene-vinyl acetate (EVA), each selected based on the required strength, flexibility, and environmental resistance.

United States market for Hot melt adhesive for Technical Textiles is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
