A Humanoid Robot Battery Pack is a specialized energy storage unit designed to power the complex electrical and mechanical systems of humanoid robots. It must deliver reliable, high-density energy with safety, long cycle life, and the ability to handle high current demands for motors, sensors, and onboard electronics. In 2025, global Humanoid Robot Battery Pack production reached approximately 14 k units with an average global market price of around US\$ 1096 per unit. The production capacity for Humanoid Robot Battery Pack in 2025 was approximately 15 k units. The typical gross profit margin for Humanoid Robot Battery Pack is between 20% and 30%.

The upstream of humanoid robot battery packs mainly includes cell manufacturers (such as 18650, 21700 cylindrical cells, prismatic and pouch cells), battery management system (BMS) chip suppliers, and module design and structural component providers. The downstream covers humanoid robot integrators, educational and research institutions, as well as industrial automation and service robot applications. Advances in upstream technology and cell energy density directly affect module performance, while downstream demands for runtime, power, and safety determine module design standards.

The humanoid robot battery packs market is rapidly growing alongside increasing demand for service robots, industrial robots, and humanoid robots. The market is driven by high-energy-density lithium-ion cells, modular designs, and intelligent battery management systems, with rising requirements for safety, runtime, and lightweight

solutions. North America, Europe, and Asia are the key market regions, with education, research, and industrial applications as major segments. With advancements in cell technology and broader adoption of robots, the market is expected to continue expanding.
