The global Indigo Naturalis Extract market size is predicted to grow from US\$ 19.72 million in 2025 to US\$ 33.23 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

In 2025, the global production of Indigo Naturalis Extract is approximately 720 tons, with an average selling price of about US\$28 per kilogram. The production capacity in 2025 is 850 tons, with an average gross profit margin of approximately 20-30%. Indigo Naturalis Extract is a deep blue powder or lump extracted from the leaves or stems of plants such as *Strobilanthes cusia* (Acanthaceae), *Polygonum tinctorium* (Polygonaceae), or *Isatis tinctoria* (Brassicaceae). Its main active components include indigo, indirubin, and tryptanthrin, and it possesses pharmacological effects such as antibacterial, antitumor, and immunomodulatory properties.

The upstream direct raw materials for Indigo Naturalis Extract mainly come from several plants, including the stems and leaves of *Isatis tinctoria*, *Polygonum tinctorium*, and *Strobilanthes cusia*. Natural indigo, processed through the traditional 'indigo dyeing' process, is the core primary processed raw material. Downstream, it is widely used in three major fields: the pharmaceutical industry (for the development of modern traditional Chinese medicine and new drugs to treat skin diseases such as psoriasis and eczema, with indirubin as the core active ingredient), the cosmetics industry (used in anti-inflammatory and soothing skincare products for acne treatment and repair), and the traditional dye industry (used as a natural colorant for textiles).

Indigo Naturalis Extract is a natural ingredient extracted from *Indigofera tinctoria*, a traditional Chinese medicinal plant. It possesses various pharmacological effects, including anti-inflammatory, antibacterial, and heat-clearing and detoxifying properties,

and is widely used in medicine, cosmetics, and dyes. In recent years, with the increasing consumer demand for natural and plant-derived health products, the market for Indigo Naturalis Extract has gradually expanded, showing strong growth potential, especially in the fields of dermatology, immune system regulation, and antioxidants. Indigo has long been used in traditional Chinese medicine to treat skin diseases such as eczema and psoriasis, and with the progress of modern medical research, the efficacy of Indigo Naturalis Extract has been increasingly verified and recognized.

Currently, the main market for Indigo Naturalis Extract is concentrated in China, India, and other Asian countries. With the popularity of natural health products and herbal therapies, demand in the European and American markets is also increasing. Especially against the backdrop of the growing popularity of organic and additive-free skincare products, the application of Indigo Naturalis Extract in the cosmetics industry is constantly expanding. Nevertheless, the market for Indigo Naturalis Extract still faces certain challenges, such as unstable raw material supply, standardization of production, and the need for increased market education.

In the future, the Indigo Naturalis Extract market will benefit from technological advancements, increased consumer awareness of natural ingredients, and the global spread of traditional Chinese medicine culture. With the improvement of relevant certifications and in-depth scientific research, Indigo Naturalis Extract is expected to achieve even wider application globally.
