Inflatable model is flexible structure that expand and take shape using air pressure. They are usually made of airtight materials (such as PVC and TPU). After being inflated with air by an air pump, they can be transformed into three-dimensional shapes and functions. They are widely used in entertainment, advertising, celebrations, exhibitions, and outdoor activities, such as inflatable swimming facilities, inflatable arches, inflatable cartoon figures, water floats, and lifesaving equipment. They are common functional decorations and amusement facilities in modern life and commerce. The price range of inflatable models varies significantly depending on factors such as product type, size, materials, and level of customization, typically ranging from several hundred US dollars to tens of thousands of US dollars.

The upstream materials include PVC/TPU-coated fabrics, nylon and polyester textiles, air valves, blowers, and bonding accessories, whose performance directly affects product strength, air tightness, and weather resistance. The midstream segment is centered on inflatable product manufacturers, covering design and prototyping, cutting, high-frequency welding or sewing, surface printing, and quality inspection, and is characterized by a high degree of customization and strong dependence on manufacturing processes and manual labor. Downstream applications are diverse, primarily serving advertising displays, cultural tourism and amusement facilities, sports events, outdoor leisure, and commercial activities, with products delivered to end users through project-based sales, direct sales, or distributor and rental channels, and demand closely linked to the experience-driven and event-based economy.
