Inflation Syringe is a medical device used for inflating and deflating balloon catheters, angioplasty balloons, and other medical balloons during minimally invasive procedures. These syringes provide precise control over inflation pressures and volumes, allowing healthcare providers to perform balloon angioplasty, stent placement, and other interventional procedures effectively and safely.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
