The global Integrated Copper Cabling market size is predicted to grow from US$ 1189 million in 2025 to US$ 2620 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Integrated copper cabling refers to the comprehensive cabling infrastructure solution composed of copper twisted-pair cables (such as Category 5e, 6, 6A, 7, etc.) along with associated connectors, patch panels, and cable management hardware, designed to support reliable voice, data, and low-voltage power transmission within buildings, enterprise LANs, and data centers, and serves as a critical physical layer backbone for modern communications, enterprise automation, and industrial networking. In 2025, global integrated copper cabling sales reached approximately 810 million meters, with an average price of 1.5 US$/meter.

The primary drivers for the integrated copper cabling market include the expansion of information communication infrastructure, enterprise digital transformation, and intelligent building upgrades; sustained demand for high-performance, scalable, and cost-effective infrastructure for data centers, campus networks, smart manufacturing, and 5G-related deployments, along with copper cabling?s cost competitiveness and established performance for short-to-medium network distances, underpins steady growth in the market.
