The global Interspinous Fixation market size is predicted to grow from US$ 105 million in 2025 to US$ 160 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

Interspinous fixation refers to a surgical procedure that involves the fixation of adjacent spinous processes of the vertebrae in the spine. The spinous processes are the bony projections extending from the posterior aspect of each vertebra. Interspinous fixation is often performed to stabilize the spine, alleviate symptoms, and address certain spinal conditions.

Ongoing research may focus on the development of advanced materials for interspinous fixation implants. These materials may include bioresorbable polymers, which could provide temporary support during the initial healing phase.
