Intra-Uterine Contraceptive Devices are contraceptive medical implants used to prevent pregnancies for a long period of time. They are also known as long-acting reversible contraceptive devices. An Intra-Uterine Contraceptive Device is a T-shaped device, made of flexible plastic, with a copper wire wrapped around its stem, and is considered a safe and reliable method of sterilization for women. It is inserted into the uterus, and its primary aim is to prevent the fertilization of the egg by causing changes.

The major factors for the growth of the intra-uterine contraceptive devices market include the technological innovations leading to effective contraception and fewer side

effects, increasing rate of unintended pregnancies, etc. Over the past few years, the awareness of contraception has contributed to both the decline in unplanned pregnancies and the growth of the contraception market. Family planning efforts, which include increasing access to intrauterine contraceptive devices, can help reduce unintended pregnancies. The use of intra-uterine contraceptive devices decreased the proportion of births that were unplanned. The usage of intra-uterine contraceptive devices is increasing year on year as women find intra-uterine contraceptive devices the most convenient, safe, and effective form of contraception.
