The global Intravenous Infusion Warmer market size is predicted to grow from US\$ 360 million in 2025 to US\$ 576 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

The intravenous infusion warmer is an electric heating device composed of a substrate, an electric heating core, a power socket, an insulating layer, a disinfection cover, and a tie. It can warm the liquid for intravenous infusion, make the patient feel comfortable and safe, and reduce or avoid the possible infusion reaction of the patient during the infusion process.

In 2024, global Intravenous Infusion Warmer production reached approximately 176 k units, with an average global market price of around US\$ 1950 per unit.

The global intravenous infusion warmer market is expanding steadily, driven by the rising demand for advanced patient care solutions in surgical, trauma, and emergency settings. Hypothermia prevention has become a critical focus in hospitals and pre-hospital care, as it is closely linked to reduced mortality rates, faster recovery, and fewer complications. This growing clinical awareness, along with technological improvements in fluid warming systems, is fueling adoption across developed healthcare systems in North America and Europe.

In emerging markets, rising healthcare investments and the modernization of emergency medical services are creating new opportunities. Countries in Asia-Pacific are witnessing stronger demand for portable and user-friendly infusion warmers, particularly in ambulance services and rural healthcare facilities where rapid and safe fluid delivery is vital. Additionally, the increasing number of surgical procedures and

road traffic accidents globally contributes to consistent market growth.

Competition in the market is characterized by both established medical device companies and niche players specializing in warming technologies. Innovation is focused on compact, energy-efficient, and easy-to-use devices that meet the needs of operating rooms as well as field applications. With healthcare providers prioritizing patient safety and operational efficiency, the intravenous infusion warmer market is expected to maintain a healthy growth trajectory in the coming years.
