## Abstracts

The global Iron Powder for Friction market size is predicted to grow from US\$ 201 million in 2025 to US\$ 259 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

Global sales of Iron Powder for Friction was about 240550 tons in 2024 with average price of 830 USD/ton. Upstream, it is made from iron/steel feedstock via routes such as reduction (sponge iron powder), water atomization, electrolysis, or carbonyl decomposition, followed by sieving/classification and (sometimes) surface treatment. Key product controls often include particle size distribution (PSD), morphology/porosity, apparent density, and chemistry/impurity limits. The average gross margin of the industry ranges from 15%-20%.

Iron Powder for Friction refers to iron-based powders specifically engineered as functional constituents in friction materials (e.g., brake pads, brake linings, clutch facings) and sintered friction parts. Unlike general-purpose iron powder, it is optimized to deliver stable friction behavior, controlled wear, and consistent processing performance during mixing, molding/pressing, curing, or sintering.
