## Abstracts

The global Isotropic Rubber Magnet market size is predicted to grow from US\$ 1347 million in 2025 to US\$ 1830 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

Isotropic rubber magnets are flexible permanent magnets made by uniformly mixing ferrite magnetic powder—typically strontium or barium ferrite—with elastomeric binders such as NBR or CPE, then calendaring, extruding, or molding the material into sheets, strips, or custom profiles without applying an external magnetic orientation field. Because the ferrite particles are randomly oriented, isotropic rubber magnets offer moderate magnetic strength but excellent flexibility, machinability, and cost efficiency for applications such as sensors, gaskets, holding strips, motors, toys, signage, and refrigerator seals. Their supply chain begins upstream with ferrite powder producers and synthetic rubber suppliers, followed by compounders who blend the rubber and magnetic powders; midstream manufacturers then form, cure, and magnetize the material into finished shapes; downstream converters cut, laminate, print, or adhesive-coat the magnets before delivering them to OEMs in the automotive, consumer goods, electronics, appliance, and industrial sectors. In 2024, global isotropic rubber magnet output reached about 1.25 million tons with 1.55 million tons of capacity, priced at USD 860–1,650 per ton and operating at an average 22% gross margin.
