Abstracts

The global Laser Cut SMT Stencil market size is predicted to grow from US$ 981 million in 2025 to US$ 1685 million in 2032; it is expected to grow at a CAGR of 8.2% from 2026 to 2032.

Laser cut stencils are typically used to manually print a single component on a printed circuit board. Maximum Size 2' x 2' Available with or without flaps (Flaps facilitate handling) Mainly used for PCB rework but can used for prototype PCB assembly of simple boards.

The global market for semiconductor was estimated at US$ 579 billion in the year 2022, is projected to US$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
