The global LCD Display Drive IC market size is predicted to grow from US$ 6710 million in 2025 to US$ 10160 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

The LCD driver chip provides a stable voltage or current drive signal for the lamp beads in the LCD display, thereby controlling the light intensity and color of the lamp beads, and changing color combinations of different shades on the liquid crystal panel, thereby ensuring the uniformity of the display screen sex and stability. At present, the stable supply of LCD driver chips has been achieved, and a large number of TFT-LCDs have turned to TDDI, and the market has entered a stage of maturity and even excessive competition. With the growing demand for LCD panels in electronic devices such as smartphones and TVs, the display driver chip market is expected to experience rapid growth worldwide, with major growth drivers including increased demand for high resolution, integrated functions, and average selling prices reduce.

The global market for semiconductor was estimated at US$ 579 billion in the year 2022, is projected to US$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal

conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
