The global LIN-bus Transceivers market size is predicted to grow from US$ 699 million in 2025 to US$ 1191 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

A LIN-bus transceiver is a hardware component that facilitates communication between electronic control units (ECUs) or nodes in a LIN (Local Interconnect Network) system, commonly used in automotive applications.

The market is growing. It`s growing fast. And it`s growing everywhere. Carried by a decarbonisation challenge most leading nations now take seriously and supported by various policies and incentives, global EV sales kept accelerating in 2023. According to the IEA, the global electric car sales reached almost 14 million, which represented a 35% increase from 2022. This growth meant that the global electric fleet rose to 40 million in 2023. And the trend seems to stay positive in 2024. Only in the first quarter of the year, sales grew by 25% compared to the same period in 2023. We're predicted to see 17 million in sales by the end of 2024. Electric cars could account for 20% of total car sales by then. The IEA sees a great growth potential, especially outside of the core markets of China, Europe and the USA. That is a good sign that e-mobility is finding its way to the rest of the world. A LIN-bus transceiver acts as the interface between a microcontroller and the LIN network, ensuring reliable, low-cost communication for automotive peripherals. It handles voltage conversion, signal integrity, and fault protection while adhering to LIN standards.
