The global Linear Comparator market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Linear comparator products can be used to evaluate the relative magnitude of two analog input signals and generate a binary (two-state) output indicating which of the two signals is greater. Closely related in function to op amps, linear comparators are specifically designed to withstand the open-loop operation and large differential input conditions common in analog comparison applications that can cause standard op amps to underperform.
