## Abstracts

The global Lithium Battery 3C Certification market size is predicted to grow from US\$ 661 million in 2025 to US\$ 1067 million in 2032; it is expected to grow at a CAGR of 9.9% from 2026 to 2032.

Lithium battery 3C certification is a mandatory product conformity assessment system implemented by the Chinese government for lithium battery products in accordance with relevant laws and regulations to protect the personal and property safety of consumers. The certification requires that lithium battery products must meet China's safety, quality and environmental requirements to ensure the legal sale and use of the products.

The main purpose of lithium battery 3C certification is to ensure the safety, quality and environmental protection of lithium battery products in the Chinese market. Through certification, it can be proved that lithium battery products comply with relevant Chinese laws and regulations and standards, thereby protecting the legitimate rights and interests of consumers and reducing the risks caused by product defects.

According to the 'Regulations on Certification and Accreditation,' products that have not passed certification and bear the required markings are prohibited from being manufactured, sold, or imported. Certification standards cover more than 40 tests, including mechanical safety (such as crushing and dropping), electrical safety (such as overcharging and short circuits), and environmental adaptability (such as temperature cycling and low pressure), ensuring that products comply with national standards such as GB 31241-2022 'Safety Technical Specifications for Lithium-ion Batteries and Battery Packs for Portable Electronic Products.' The industry's gross profit margin can reach 25%-45%.

Market driving factors mainly include the following:

### Mandatory Policy and Standard Upgrades

China has included lithium-ion batteries in the 3C mandatory certification catalog, forcing companies to improve product safety and compliance. Simultaneously, the EU's 'Battery Regulation' requires a 70% battery recycling rate by 2030, driving the industry towards green transformation. Companies need to pass 3C certification to comply with international market access rules.

### Expanding Application Scenarios and Upgrading Demands

The increasing penetration rate of new energy vehicles, the large-scale deployment of energy storage systems, and the accelerated iteration of consumer electronics place higher demands on battery energy density, charging speed, and safety. For example, lithium batteries for electric bicycles must pass both the national standard and 3C certification to ensure that the risk of thermal runaway is controllable.

### Technological iteration and supply chain collaboration

Breakthroughs in new technologies such as solid-state batteries and sodium-ion batteries reduce reliance on scarce resources and enhance cost competitiveness. Upstream and downstream partners in the supply chain accelerate technology implementation and market penetration through joint R&D (such as sharing test databases) and standardization (such as the CTC interface specification). For example, CATL has shortened its R&D cycle by 30% through its integrated 'cell-system' testing solution.
