The global Lithium Battery Electric Screwdriver market size is predicted to grow from US\$ 1859 million in 2025 to US\$ 2872 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Global production of lithium-ion battery-powered electric screwdrivers is projected to reach 20 million units by 2025, with an average price of approximately \$95 per unit.

A lithium-ion battery-powered electric screwdriver is a portable power tool powered by a lithium-ion battery, using a motor to rotate the screwdriver bit for tightening or loosening screws. Its core advantages lie in its cordless design, high torque output, and intelligent control. Widely used in home DIY, professional repair, and industrial assembly, it is an indispensable and efficient tool in modern manufacturing and handicrafts. The industry's gross profit margin is approximately 15-30%.

Upstream: This includes lithium-ion batteries (core power source), motors (drive components), reducers (torque amplification), drive shafts (power transmission), and casing materials (ABS/aluminum alloy), with lithium-ion batteries accounting for over 30% of the cost. Technological advancements are driving improvements in energy density.

Downstream: This segment caters to various scenarios such as home repair, industrial assembly, electronic product disassembly and assembly, and automotive repair, with demand from both B-end customers (such as factories and repair shops) and C-end consumers (such as DIY enthusiasts).

Market drivers primarily include:

Accelerated penetration of cordless technology: Breakthroughs in lithium battery technology (increased energy density, shorter charging time) are driving the transformation of power tools from corded to cordless. Lithium-ion battery-powered screwdrivers have become the mainstream choice due to their portability, especially with surging demand in high-altitude operations and mobile scenarios.

Consumption Upgrade and Scenarios Expansion: The rise of DIY home culture, the increasing precision of electronic products (such as mobile phone repair), and the growing demand for new energy vehicle repair are driving product upgrades towards higher precision and multi-functionality, expanding the high-end market.

Policies and Standards Drive Substitution: The EU's ban on the sale of nickel-cadmium battery power tools and China's introduction of lithium-ion battery tool standards are forcing companies to accelerate their lithium-ion transformation. Simultaneously, environmental policies are promoting the improvement of waste battery recycling systems, reducing long-term usage costs.
