The global Lithium Battery Wood Planer market size is predicted to grow from US\$ 185 million in 2025 to US\$ 248 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Global production of lithium-ion battery wood planers is projected to reach 1.8 million units by 2025, with an average price of approximately \$105 per unit.

A lithium-ion battery wood planer is a portable power tool powered by a lithium-ion battery, using a brushless motor to drive the planer blades at high speed for planing, smoothing, or shaping the surface of wood. Its core advantages lie in its cordless design, high-precision planing force, and adaptability to various scenarios, making it widely used in furniture manufacturing, woodworking DIY, and interior decoration. The industry's gross profit margin is approximately 16-32%.

Upstream: This includes lithium-ion batteries (core power source), brushless motors (drive components), planer blades (consumables), controllers (power management), and casing materials (high-strength plastics/aluminum alloys), with brushless motors and lithium batteries accounting for over 50% of the cost. Technological advancements are driving improvements in energy efficiency and lifespan. Downstream: This segment targets woodworking workshops, furniture factories, renovation teams, and DIY enthusiasts, with both B2B clients (such as custom furniture manufacturers) and B2C consumers demanding the product.

Market drivers primarily include:

Personalized customization demands driving tool upgrades: As the home decoration

and furniture customization industry moves towards personalization and refinement, traditional fixed wood planers are insufficient to meet the needs of irregularly shaped wood or small-batch processing. Lithium battery wood planers, with their portability and flexibility, have become core tools for woodworking workshops and decoration teams, facilitating 'small-batch, high-precision' operation modes. Environmental policies and the trend towards cordless operation are accelerating penetration: Many countries worldwide have introduced environmental regulations restricting the use of fuel-powered tools, while consumers are demanding greater comfort in their work environments. Lithium-ion battery-powered wood planers, with their zero emissions and low noise, align with green construction principles and are gradually replacing traditional corded or fuel-powered models, especially in enclosed spaces such as home renovations.

DIY culture and woodworking education are stimulating consumer potential: Short video platforms and social media are driving the popularity of DIY woodworking culture, with more and more consumers trying to make their own furniture and decorations. Lithium-ion battery-powered wood planers are easy to operate and highly safe, making them the preferred tool for beginner woodworking enthusiasts, driving rapid growth in the consumer market. Furthermore, vocational schools and training institutions are incorporating portable power tools into their curricula, further expanding the user base.
