The global Low Temperature Superconducting Magnetic Separator market size is predicted to grow from US$ 181 million in 2025 to US$ 271 million in 2031; it is expected to grow at a CAGR of 7.0% from 2025 to 2031.

Low temperature superconducting magnetic separator is a magnetic separation equipment that uses low-temperature superconducting materials to generate a strong magnetic field, used in mineral beneficiation, waste recycling and other fields. This magnetic separator adopts low-temperature superconducting technology, which enables it to generate a much stronger magnetic field than traditional magnetic separation equipment, thereby separating magnetic minerals or substances. Compared with ordinary permanent magnet or electromagnetic magnetic separators, low-temperature superconducting magnetic separators have higher magnetic field strength, more accurate sorting effect, and higher processing capacity.

United States market for Low Temperature Superconducting Magnetic Separator is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
