The global Marine Vessel Energy Efficiency Solutions market size is predicted to grow from US$ 818 million in 2025 to US$ 984 million in 2032; it is expected to grow at a CAGR of 2.7% from 2026 to 2032.

Marine vessel energy efficiency refers to the solutions that enhance operational efficiency through sustainable energy usage. The growing consumption of fossil gases and emission of greenhouse gases (GHG) has created serious tensions in the marine industry. Thus, to reduce harmful gas emissions from marine vessels, International Maritime Organization (IMO) has made it compulsory to implement Energy Efficiency Design Index onboard for the monitoring of the amount of CO2 and other GHG from ships.

In July 2011, the International Maritime Organization (IMO) adopted two energy efficiency measures, which entered into force in 2013: the Energy Efficiency Design Index (EEDI) for new ships and the Ship Energy Efficiency Managements Plan (SEEMP) for all ships. The large demand drives Marine Vessel Energy Efficiency industry developing in the past few years.
