The global Mass Impregnated (MI) Submarine Cables market size is predicted to grow from US$ 543 million in 2025 to US$ 1349 million in 2031; it is expected to grow at a CAGR of 16.4% from 2025 to 2031.

Mass impregnated (MI) submarine cables are typically constructed with layers of insulating paper separated by polypropylene material, and impregnated with high-viscosity non-dripping insulating oil to enhance their insulation and thermal resistance properties. These cables exhibit a high breakdown field strength under direct current (DC) fields and can withstand significant field strength distortion. Their design eliminates the need for complex oil supply systems, making them suitable for high-drop environments, while the non-flow nature of the impregnating agent ensures stability and reliability in long-distance, high-depth interconnection projects.

United States market for Mass Impregnated (MI) Submarine Cables is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
