The global Memory Varactors market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The memory varactor is capable of producing very short pulses. Also known as a step recovery diode, it has a variety of uses as a pulse generator or parametric amplifier in microwave electronics. When the diode switches from forward conducting to reverse blocking, reverse current flows briefly as the stored charge is removed. The abruptness of this reverse current stop is characteristic of step recovery diodes.
