The global Metal Mining Magnetic Separator market size is predicted to grow from US$ 554 million in 2025 to US$ 759 million in 2031; it is expected to grow at a CAGR of 5.4% from 2025 to 2031.

Metal mining magnetic separator is a device used for the beneficiation of metal ores. It uses magnetic force to separate magnetic minerals from non-magnetic minerals in the ore, thereby improving the grade of the ore. It is widely used in the beneficiation operations of metal ores such as iron ore, bauxite, and manganese ore. Magnetic separators separate magnetic substances from ores by generating strong magnetic fields and utilizing the different magnetic differences between magnetic substances (such as iron ore, ilmenite, etc.) and non-magnetic substances (such as quartz, feldspar, barite, etc.) in ores. Usually, magnetic separators attract and collect magnetic minerals through rotating magnetic drums, rollers, or magnetic fields, and then separate them through corresponding cleaning devices.
