The global Methyl CLT Acid market size is predicted to grow from US\$ 40.89 million in 2025 to US\$ 55.46 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

In 2025, global production of methyl CLT acid reached 13,200 tons, with an average selling price of US\$3,164 per ton. Methyl CLT Acid, chemical name: 2-Amino-4-methyl-5-chlorobenzenesulfonic acid, chemical formula: $C_7H_8ClNO_3S$, CAS Number: 88-53-9. Methyl CLT acid is used to manufacture organic pigments such as Jinguanghong C, Xinbaohong 36B, plastic scarlet LG, plastic red, and other lake pigments. These pigments are widely used in paints, coatings, color inks, the coloring of rubber and plastic, etc.

The global market for Methyl CLT Acid, a significant intermediate for red organic pigments, is closely tied to demand from downstream coloring applications such as paints and coatings, inks, rubber, and plastics. The current market landscape features a degree of concentration in production, with China and India being key manufacturing regions, and major producers including Zhejiang Qinyan Technology from China and Emco Dyestuff from India. Its growth is primarily driven by the expansion of downstream manufacturing sectors, particularly packaging and construction in the Asia-Pacific region. However, the industry simultaneously contends with challenges posed by increasingly stringent global environmental regulations and volatility in raw material costs. Future opportunities for the market are likely to arise from the growing demand for higher-performance and more environmentally friendly specialty pigments in end-use industries, coupled with ongoing technological advancements aimed at greener and more efficient production processes.
