Military EMP bags, are specialized storage containers designed to protect electronic devices from electromagnetic pulses (EMPs). An EMP is a burst of electromagnetic radiation that can disrupt or damage electronic equipment, potentially rendering it inoperable.

These bags are typically made from materials that can block electromagnetic fields, such as metal mesh or conductive fabrics. When electronics like phones, radios, or computers are placed inside, the bag creates a protective shield that prevents the EMP from reaching and damaging the devices inside. EMP bags are commonly used by military personnel, government agencies, and individuals who need to safeguard their electronics from both natural and man-made electromagnetic threats.
