## Abstracts

The global Military Hydraulic Equipment market size is predicted to grow from US\$ 1464 million in 2025 to US\$ 2336 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

In 2025, global Military Hydraulic Equipment production reached approximately 56.4 K units, with an average global market price of around US\$ 26500 per unit.

Military hydraulic equipment refers to a type of power control and execution equipment designed and manufactured based on the principle of hydraulic transmission, specifically adapted to scenarios such as combat, training, and logistical support in the military field. Its core function is to transmit power through the pressure energy of a liquid (hydraulic oil), achieving force amplification, precise speed control, and smooth execution of actions. It possesses military-specific characteristics such as high load capacity, resistance to harsh environments, high reliability, and strong anti-interference capabilities, making it one of the core power components of weaponry and military engineering systems.

As military equipment shifts towards lightweight and highly mobile designs, optimizing the size and weight of hydraulic equipment has become a crucial research and development direction. First, high-strength lightweight alloy materials (such as titanium and aluminum alloys) are being used to replace traditional steel. This significantly reduces equipment weight while maintaining structural strength and load-bearing capacity, adapting to the integration needs of lightweight equipment such as drones, light armored vehicles, and portable missile launchers. Second, the structural design of hydraulic systems is being optimized by using integrated valve blocks and compact hydraulic pumps to reduce piping connections, improve system space utilization, and

lower the risk of hydraulic oil leakage. Third, new hydraulic media are being developed, such as environmentally friendly hydraulic oils with high viscosity index and low pour point, to improve the efficiency of hydraulic systems in extreme temperature environments while meeting the stringent requirements of lightweight equipment for media performance.
