The global Mucuna Extract market size is predicted to grow from US\$ 50.54 million in 2025 to US\$ 74.88 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2025, the global production of Mucuna Extract is estimated at approximately 820 tons, with an average selling price of around US\$65 per kilogram. The production capacity in 2025 is 1060 tons, with an average gross profit margin of approximately 30-40%. Mucuna Extract is a natural ingredient extracted from the seeds of the legume plant *Mucuna pruriens*. It is rich in L-Dopa, a natural dopamine precursor that effectively increases dopamine levels in the brain, supports nervous system health, and is often used in traditional complementary treatments for Parkinson's disease and in dietary supplements.

The core upstream raw material for *Mucuna pruriens* extract is *Mucuna pruriens* seeds, mainly referring to the dried seeds of *Mucuna pruriens*, whose L-Dopa content is a key quality indicator. Downstream applications are highly concentrated in specific, strictly regulated industries, primarily the pharmaceutical industry, where it is used as a source of natural L-Dopa for the production of Parkinson's disease medications or compound preparations; secondly, the dietary supplement industry, where it is used as a functional ingredient to improve mood and athletic performance in regions where regulations permit; and also in a few research fields.

Mucuna Extract is a natural plant extract with rich pharmacological activity, widely used in health products, pharmaceuticals, cosmetics, and other fields. In traditional Chinese medicine, mucuna is used for clearing heat and detoxifying, and for its diuretic and anti-inflammatory effects. In recent years, the application of its extract in modern health and skincare products has increased, particularly its antioxidant, anti-inflammatory, and antibacterial properties, which have attracted market attention. With the increasing

consumer demand for natural, plant-based products, Mucuna Extract, as a functional plant ingredient, has become an emerging highlight in the market for traditional Chinese medicine extracts.

In China, Mucuna Extract is mainly used in traditional Chinese medicine health products and nutritional supplements, enjoying a strong market foundation. With the increasing health awareness of domestic consumers and the growing demand for natural herbal ingredients, the market potential of quinoa extract is further expanding. In the international market, especially in Europe and the United States, natural plant extracts are receiving increasing attention. The antioxidant and anti-inflammatory effects of Mucuna Extract align with modern consumers' preferences for natural therapies and health products, and it is expected to continue to grow in the global market in the coming years.

Overall, the market prospects for Mucuna Extract are broad. With the expansion of application fields and technological advancements, its production and demand are expected to grow steadily in the coming years.
