The global Myrrh Extract market size is predicted to grow from US\$ 41.95 million in 2025 to US\$ 58.03 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2025, the global production of myrrh extract was approximately 640 tons, with an average selling price of about US\$67 per kilogram. The production capacity in 2025 was 820 tons, with an average gross profit margin of approximately 20-30%. Myrrh extract is a natural active ingredient extracted from the resin of the myrrh tree, rich in terpenoids, volatile oils, and myrrhic acid. It possesses anti-inflammatory, antibacterial, and antioxidant properties and is commonly used in traditional medicine and modern health products.

The upstream of the myrrh extract industry is centered on natural myrrh resin as the core raw material; the downstream applications are widespread, including pharmaceuticals, cosmetics, health products, food, and traditional religious and cultural products. In the pharmaceutical field, it is used for anti-inflammatory, antibacterial, and wound healing purposes; in cosmetics, it serves as a natural active ingredient for anti-aging and repair; in the health product sector, it is used to develop dietary supplements for regulating blood lipids; and in the food industry and religious ceremonies, it is used as a spice or incense ingredient.

Myrrh extract, a plant-derived medicinal extract with a long history, has gained increasing attention in the global market in recent years, particularly in the pharmaceutical, cosmetic, and health supplement industries. Myrrh extract is rich in active ingredients with antibacterial, anti-inflammatory, wound-healing, and antioxidant properties, and is widely used in various medications and natural therapies, especially in traditional medicine. With the increasing consumer demand for natural ingredients and herbal products, the market demand for myrrh extract continues to rise.

In the cosmetics industry, myrrh extract has become an important ingredient in high-end skincare products due to its excellent anti-aging and anti-inflammatory effects, and is widely used in products for anti-aging, skin soothing, and treating skin problems. Meanwhile, in the health supplement industry, myrrh extract is used as a natural immune enhancer, antioxidant, and anti-inflammatory ingredient, driving its use in dietary supplements and functional foods.

Geographically, myrrh is primarily cultivated in Asia, with China and India playing significant roles in its production and use. The increasing demand for natural medicinal plant extracts in the European and American markets has driven the export and application of myrrh extract. Despite this, the market still faces challenges related to raw material supply and price fluctuations, which may affect its future development. However, with the popularization of phytotherapy and the rise of green health concepts, the market prospects for myrrh extract remain broad and are expected to continue to grow.
