The global Non-Replicating mRNA Vaccine market size is predicted to grow from US$ 1451 million in 2025 to US$ 2012 million in 2031; it is expected to grow at a CAGR of 5.6% from 2025 to 2031.

A Non-Replicating mRNA Vaccine is a vaccine based on messenger RNA (mRNA) technology, characterized by the use of mRNA that does not replicate within the recipient's body. This vaccine delivers mRNA encoding specific antigens (such as proteins on the surface of viruses) to human cells, prompting them to produce protein fragments of these antigens. This, in turn, stimulates the immune system to generate an immune response against these antigens, such as antibody production and T-cell activation. Due to its non-replicating nature, the vaccine is highly safe and does not cause infection or disease. Non-Replicating mRNA Vaccines have been widely used in the COVID-19 pandemic, demonstrating their advantages of rapid development, efficient production, and easy distribution.

United States market for Non-Replicating mRNA Vaccine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
