## Abstracts

The global Nuclear-grade Epoxy Coating market size is predicted to grow from US\$ 351 million in 2025 to US\$ 536 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

Nuclear-grade Epoxy Coating is a specially formulated epoxy-based paint system qualified for use in safety-related areas of nuclear power plants. As a category of nuclear-grade protective coating, it must undergo rigorous qualification testing to demonstrate long-term resistance to high-dose radiation, chemical exposure (e.g., boric acid), and harsh environmental conditions while maintaining integrity post-DBA. Its key characteristics include a smooth, non-porous surface for easy decontamination, providing a protective barrier on substrates like concrete and steel within containment to ensure safety and longevity.

In 2025, the global production of nuclear-grade epoxy coating reached 3,415.5 tons, with an average selling price of US\$105/kg and a production capacity of approximately 4,800 tons. The industry's gross profit margin was approximately 30%–40%. Cost structure: direct materials accounted for approximately 70%, manufacturing costs approximately 22%, and labor costs approximately 8%. Industry chain: upstream consists of epoxy resin, pigments and fillers (including zinc powder, etc.), curing agents, solvents, functional additives, and chemical raw materials; downstream consists of nuclear power plants/nuclear facilities.

United States market for Nuclear-grade Epoxy Coating is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
