The global Ophthalmic OCT System market size is predicted to grow from US$ 2498 million in 2025 to US$ 6995 million in 2032; it is expected to grow at a CAGR of 16.2% from 2026 to 2032.

Ophthalmic OCT System is a non-contact, high-resolution tomographic and biomicroscopic imaging device. It can be used for in vivo viewing, axial sectioning, and measurement of posterior ocular structures, including the retina, retinal nerve fiber layer, macula, and optic disc, and is particularly useful as an aid in the detection and management of eye diseases, including but not limited to macular holes, macular sacs edema, diabetic retinopathy, age-related macular degeneration and glaucoma). OCT is now divided into two types: time domain and frequency domain.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
