The global Optical Procximity Correction (OPC) Software market size is predicted to grow from US$ 438 million in 2025 to US$ 596 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

Optical Proximity Correction (OPC) is a lithography resolution enhancement technique. OPC is mainly used in the production process of semiconductor devices. In photolithography, the patterns on the mask are projected onto the photoresist through an exposure system. Due to the imperfections of the optical system and diffraction effects, the patterns on the photoresist and mask are not completely consistent. If these distortions are not corrected, they may greatly alter the electrical performance of the produced circuit. Optical Proximity Correction (OPC) is the use of computational methods to correct the patterns on the mask, so that the patterns projected onto the photoresist meet the design requirements as much as possible.

United States market for Optical Procximity Correction (OPC) Software is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
