The global Organic Film Coating market size is predicted to grow from US\$ 105 million in 2025 to US\$ 162 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

Organic film coating is a pharmaceutical formulation technology that involves dissolving a high molecular weight polymer in an organic solvent, adding excipients such as plasticizers to create a coating solution, and then using spraying technology to form a thin and continuous organic polymer film on the surface of tablets and other pharmaceutical products. This achieves functions such as isolation, flavor masking, controlled release, and improved stability, and is an important modern coating technology that replaces traditional sugar coating.

In 2025, global production of organic film coatings reached 3,147 tons, with an average selling price of US\$34/kg and a capacity of approximately 4,500 tons. The industry's gross profit margin was approximately 10%–20%. Cost structure: direct materials accounted for approximately 70%, manufacturing costs approximately 23%, and labor costs approximately 7%. Industry chain: upstream consists of raw material suppliers such as polymers, pigments, plasticizers, and solvents; downstream consists of formulation manufacturers.

United States market for Organic Film Coating is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
