The global Outbound Baggage Handling System market size is predicted to grow from US\$ 11152 million in 2025 to US\$ 16822 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

The Outbound Baggage Handling System (BHS) is an automated system used by airports to handle passenger baggage. It consists of conveyor belts, sorting equipment, security screening modules, and an information control system. It is responsible for transporting baggage from check-in counters to security screening points and then sorting it to the correct flight loading points. It solves problems such as low efficiency of manual handling, baggage missorting, and security screening delays, improving airport operational efficiency and passenger experience. The system costs approximately US\$18 million per unit. Upstream components include conveyor belt materials (wear-resistant rubber, steel), motors and drive systems (power 5–50 kW), security screening equipment (CT scanners/X-rays), and information systems (RFID chips, barcode printers). Downstream customers include international airports, regional airports, and transportation hubs. Future trends include intelligentization (AI sorting), digitalization (IoT + big data), environmental protection and energy saving (low-power motors), and high reliability (?99.5% system availability).

United States market for Outbound Baggage Handling System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
