The global Pan Vascular Robot market size is predicted to grow from US$ 859 million in 2025 to US$ 1266 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Pan-vascular surgical robots are used to treat diseases of blood vessels or related organs in the heart, brain or peripheral vasculature. In panvascular surgery, the surgeon punctures the patient"s skin, inserts a needle and then a sheath sequentially into a large blood vessel, and then guides a long, thin guidewire into the blood vessel, eventually reaching a target site in the heart, brain, or peripheral vasculature. Different types of instruments can be placed on the tip of the catheter for different purposes (such as placing an implant or collecting a sample). It is mainly composed of mechanical device and control system, image navigation and force feedback system.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
