PFAS-Free Greaseproof Packaging is an eco-friendly packaging solution that does not use per- and polyfluoroalkyl substances (PFAS), aiming to provide safe grease resistance while reducing potential harm to the environment and health. PFAS are a group of chemicals widely used in greaseproof and waterproof coatings, but due to their persistence, bioaccumulation, and potential toxicity, they are being restricted globally. PFAS-free greaseproof packaging typically uses natural or synthetic alternative materials (such as bio-based coatings, mineral coatings) to achieve grease resistance, suitable for food packaging, fast food packaging, and industrial packaging. With stricter environmental regulations and growing consumer concern for health and safety, PFAS-free greaseproof packaging is becoming an important trend in the packaging industry.

United States market for PFAS-Free Greaseproof Packaging is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
