Abstracts

The global Plant-Based Bioherbicides market size is predicted to grow from US$ 1209 million in 2025 to US$ 1887 million in 2031; it is expected to grow at a CAGR of 7.7% from 2025 to 2031.

Plant-based bioherbicides refer to natural organic compounds extracted from plants that have the ability to kill or inhibit weed growth. The main components include plant extracts, plant essential oils, plant alkaloids, such as matrine, berberine, tea tree oil, etc. These components achieve weed control effects by interfering with the physiological processes of weeds, such as photosynthesis and cell division. Compared with chemical herbicides, plant-based bioherbicides have the characteristics of natural, environmentally friendly, low toxicity, and high efficiency, with less impact on the environment and human health, which meets the needs of green agriculture and sustainable development.

The market for plant-based bioherbicides has been continuously growing in recent years, driven by environmental demands, policy support, and technological advancements. With the increasing global attention to environmental protection, plant-based bioherbicides are favored due to their low toxicity and environmental friendliness. The advancement of biotechnology has driven the research and application of new plant-based bioherbicides. The series of policies introduced by governments around the world to support green agriculture have also promoted the development of the market. As one of the largest pesticide consumption markets in the world, China's market for plant-based bioherbicides has been expanding year by year and has become an important driving force for global market growth. The main participants in the global market include international companies such as Isagro, Futureco Bioscience, Bayer, as well as domestic companies such as Jiangsu Yangnong Chemical and Wynca Group. Due to

the huge market potential and increasing policy support, the share of domestic enterprises in the plant-based bioherbicides market is gradually increasing. However, compared with international giants, domestic enterprises still have certain gaps in brand influence, technological level, and industrial chain integration ability. In the future, the research and development of plant-based bioherbicides will focus more on improving product stability and effectiveness, such as optimizing production processes through genetic engineering and microbial fermentation technology. With the popularization of the concept of sustainable agricultural development, the application fields of plant-based bioherbicides will be further expanded, including organic agriculture and horticulture.
