A Plasma Surgical System is a medical device that utilizes plasma energy for precise tissue dissection, coagulation, and ablation in various surgical procedures. Plasma, an ionized gas, allows for controlled cutting and hemostasis with minimal thermal damage to surrounding tissues, reducing blood loss and improving healing outcomes. These systems are commonly used in fields such as general surgery, orthopedics, ENT (ear, nose, and throat), and oncology. Compared to traditional electrosurgical or laser-based techniques, plasma surgical systems offer greater precision, reduced collateral damage, and improved safety for delicate or highly vascularized tissues.

United States market for Plasma Surgical System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
