Abstracts

The global Polysuccinimide (PSI) market size is predicted to grow from US$ 60.65 million in 2025 to US$ 89.26 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

Polysuccinimide (PSI) is a functional polymer primarily composed of repeating succinimide units. It is typically produced through the thermal polycondensation of aspartic acid or through reactions involving maleic anhydride and ammonia followed by cyclization and polycondensation, and serves as an important precursor and intermediate for polyaspartic acid (PASP) and its functional derivatives. PSI is generally supplied in powder or granular form and exhibits good chemical reactivity. It can be converted into polyaspartic acid through alkaline hydrolysis and can also undergo further grafting, crosslinking, or functional modification. Commercial products are differentiated mainly by molecular weight, purity, residual monomer content, moisture, and production process. Lower-molecular-weight grades generally provide faster hydrolysis and reaction characteristics, while medium-to-high molecular weight grades are more suitable for applications requiring higher degrees of polymerization and enhanced downstream material performance.

Key Findings

Global commercial PSI supply is concentrated among a limited number of specialized manufacturers

China has become an important industrial production and supply base for PSI

Low and medium-to-high molecular weight grades form the principal commercial

+357 96 030922
info@marketpublishers.com

product structure

Chemical intermediates and water treatment represent important application areas for PSI

Production process and purity are key determinants of PSI cost and application suitability

Market Trends

PSI is evolving from a dedicated precursor for PASP toward a broader functional polymer intermediate. Downstream customers increasingly emphasize molecular-weight consistency, residual monomer control, purity, and batch stability. Producers are optimizing both aspartic acid thermal polycondensation and maleic anhydride-ammonia routes to reduce energy consumption and by-products while improving suitability for agriculture, water treatment, construction materials, and functional polymer modification.

Market Dynamics

Drivers

Demand for polyaspartic acid and its derivatives provides an important foundation for industrial PSI production. Through hydrolysis and further functionalization, PSI can be converted into polymers with scale inhibition, dispersion, chelation, and biodegradability characteristics. Increasing interest in degradable functional materials for water treatment, agricultural efficiency, and green chemical applications also supports the industrial value of PSI as both an intermediate and functional material platform.

Restraints

The PSI market remains relatively specialized, with downstream demand concentrated in a limited number of applications, restricting the ability of the industry to absorb large-scale capacity expansions. Different production routes vary in raw-material cost, reaction temperature, energy consumption, by-product control, and product color. Direct PASP production routes and alternative scale-control or dispersing materials may also substitute for PSI in selected applications.

Opportunities

China has established meaningful industrial PSI production capabilities, providing a

+357 96 030922
info@marketpublishers.com

localized raw-material base for polyaspartic acid, fertilizer efficiency products, and water-treatment chemicals. Future opportunities are concentrated in high-purity PSI, tailored molecular-weight grades, and products developed specifically for agriculture, construction, and functional polymer modification. Expansion of green chemicals and biodegradable polymer applications may further increase the value of PSI as a versatile platform intermediate.

Challenges

Commercial PSI production requires consistent control of molecular-weight distribution, residual raw materials, moisture, color, and batch quality while maintaining acceptable energy consumption and yield under industrial operating conditions. Because downstream customers have different requirements for hydrolysis rate, modification reactivity, and impurity levels, standard grades cannot address every application, requiring producers to invest continuously in grade development and customer qualification.

Industry Chain Analysis

The upstream PSI industry chain includes aspartic acid, maleic anhydride, ammonia, energy, and polymerization equipment, with route selection directly influencing production economics and impurity profiles. Midstream production uses either aspartic acid thermal polycondensation or the maleic anhydride-ammonia process to form PSI, followed by grinding, classification, purification, and quality control to create products with different molecular-weight and purity specifications. Downstream applications include polyaspartic acid and other chemical intermediates, water treatment, agriculture, and construction materials. Value creation is concentrated in polymerization control, product consistency, and downstream functionalization compatibility, while high-quality PSI can reduce variability during subsequent hydrolysis and modification.

Segment Insights

By molecular weight, PSI is mainly divided into Low Molecular Weight (?4,000) and Medium-to-High Molecular Weight (>4,000). Lower-molecular-weight grades offer favorable reaction activity and downstream processing characteristics for selected PASP production and functionalization processes, while medium-to-high molecular-weight products emphasize polymerization degree and structural performance for applications requiring stronger final polymer properties. By purity, the market is divided into Purity <96% and Purity ?96%, with higher-purity products offering advantages in

+357 96 030922
info@marketpublishers.com

impurity control and downstream reaction stability. By production process, Aspartic Acid Thermal Polycondensation and the Maleic Anhydride-Ammonia Process are the principal routes, with different balances of cost, energy consumption, and product quality.

Downstream Market Opportunities

Chemical intermediates represent a fundamental downstream application for PSI, particularly as a precursor to polyaspartic acid and related derivatives. Water-treatment applications focus on the scale-control and dispersing properties of downstream products, while agricultural applications emphasize fertilizer efficiency and nutrient utilization. Construction-material applications involve functional modification of cementitious and gypsum-based systems. Higher-value opportunities are expected in high-purity PSI and molecular-weight-customized products designed for specific downstream reactions.

Regional Insights

Global PSI supply is regionally concentrated. Europe has an established specialty-chemical application base, while China has developed notable industrial production capabilities supported by downstream polyaspartic acid, water-treatment, and agricultural chemical industries. As Chinese manufacturers continue to improve process control and commercial supply capabilities, Asia is becoming increasingly important in both PSI production and downstream conversion.

Competitive Landscape Analysis

The global PSI market has a limited number of participants, with competition centered on reliable industrial production, molecular-weight control, purity, cost efficiency, and downstream customer support. LANXESS has an established commercial product position internationally, while Shandong Taihe Technologies, Hebei Think-Do Chemicals, and Shandong Yuanlian Chemical have developed identifiable industrial production or commercial supply capabilities in China. Given the specialized nature of the market, customer qualification, supply reliability, and integration with downstream PASP-related applications remain important competitive barriers.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Polysuccinimide (PSI) Industry

+357 96 030922
info@marketpublishers.com

Forecast" looks at past sales and reviews total world Polysuccinimide (PSI) sales in 2025, providing a comprehensive analysis by region and market sector of projected Polysuccinimide (PSI) sales for 2026 through 2032. With Polysuccinimide (PSI) sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Polysuccinimide (PSI) industry.

This Insight Report provides a comprehensive analysis of the global Polysuccinimide (PSI) landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Polysuccinimide (PSI) portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Polysuccinimide (PSI) market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Polysuccinimide (PSI) and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Polysuccinimide (PSI).

This report presents a comprehensive overview, market shares, and growth opportunities of Polysuccinimide (PSI) market by product type, application, key manufacturers and key regions and countries.

Market Segmentation

Segmentation by Type:

Key Questions Addressed in this Report

What is the 10-year outlook for the global Polysuccinimide (PSI) market?

What factors are driving Polysuccinimide (PSI) market growth, globally and by region?

Which technologies are poised for the fastest growth by market and region?

How do Polysuccinimide (PSI) market opportunities vary by end market size?

How does Polysuccinimide (PSI) break out by Type, by Application?

+357 96 030922

Contents

1 SCOPE OF THE REPORT

1.1 Market Introduction
1.2 Years Considered
1.3 Research Objectives
1.4 Market Research Methodology
1.5 Research Process and Data Source
1.6 Economic Indicators
1.7 Currency Considered
1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

2.1 World Market Overview
  2.1.1 Global Polysuccinimide (PSI) Annual Sales 2021-2032
  2.1.2 World Current & Future Analysis for Polysuccinimide (PSI) by Geographic Region, 2021, 2025 & 2032
  2.1.3 World Current & Future Analysis for Polysuccinimide (PSI) by Country/Region, 2021, 2025 & 2032
2.2 Polysuccinimide (PSI) Segment by Type
  2.2.1 Low Molecular Weight (?4,000)
  2.2.2 Medium-to-High Molecular Weight (>4,000)
  2.2.3 Polysuccinimide (PSI) Sales by Type
    2.2.3.1 Global Polysuccinimide (PSI) Sales Market Share by Type (2021-2026)
    2.2.3.2 Global Polysuccinimide (PSI) Revenue and Market Share by Type (2021-2026)
    2.2.3.3 Global Polysuccinimide (PSI) Sale Price by Type (2021-2026)
2.3 Polysuccinimide (PSI) Segment by Purity
  2.3.1 Purity ?96%
  2.3.2 Purity ?96%
  2.3.3 Polysuccinimide (PSI) Sales by Purity
    2.3.3.1 Global Polysuccinimide (PSI) Sales Market Share by Purity (2021-2026)
    2.3.3.2 Global Polysuccinimide (PSI) Revenue and Market Share by Purity (2021-2026)
    2.3.3.3 Global Polysuccinimide (PSI) Sale Price by Purity (2021-2026)
2.4 Polysuccinimide (PSI) Segment by Production Process
  2.4.1 Aspartic Acid Thermal Polycondensation

+357 96 030922
info@marketpublishers.com

2.4.2 Maleic Anhydride-Ammonia Process
2.4.3 Others
2.4.4 Polysuccinimide (PSI) Sales by Production Process
2.4.4.1 Global Polysuccinimide (PSI) Sales Market Share by Production Process (2021-2026)
2.4.4.2 Global Polysuccinimide (PSI) Revenue and Market Share by Production Process (2021-2026)
2.4.4.3 Global Polysuccinimide (PSI) Sale Price by Production Process (2021-2026)
2.5 Polysuccinimide (PSI) Segment by Application
2.5.1 Water Treatment
2.5.2 Agriculture
2.5.3 Construction Materials
2.5.4 Chemical Intermediates
2.5.5 Other
2.5.6 Polysuccinimide (PSI) Sales by Application
2.5.6.1 Global Polysuccinimide (PSI) Sale Market Share by Application (2021-2026)
2.5.6.2 Global Polysuccinimide (PSI) Revenue and Market Share by Application (2021-2026)
2.5.6.3 Global Polysuccinimide (PSI) Sale Price by Application (2021-2026)

3 GLOBAL BY COMPANY

3.1 Global Polysuccinimide (PSI) Breakdown Data by Company
3.1.1 Global Polysuccinimide (PSI) Annual Sales by Company (2021-2026)
3.1.2 Global Polysuccinimide (PSI) Sales Market Share by Company (2021-2026)
3.2 Global Polysuccinimide (PSI) Annual Revenue by Company (2021-2026)
3.2.1 Global Polysuccinimide (PSI) Revenue by Company (2021-2026)
3.2.2 Global Polysuccinimide (PSI) Revenue Market Share by Company (2021-2026)
3.3 Global Polysuccinimide (PSI) Sale Price by Company
3.4 Key Manufacturers Polysuccinimide (PSI) Producing Area Distribution, Sales Area, Product Type
3.4.1 Key Manufacturers Polysuccinimide (PSI) Product Location Distribution
3.4.2 Players Polysuccinimide (PSI) Products Offered
3.5 Market Concentration Rate Analysis
3.5.1 Competition Landscape Analysis
3.5.2 Concentration Ratio (CR3, CR5 and CR10) & (2024-2026)
3.6 New Products and Potential Entrants
3.7 Market M&A Activity & Strategy

I would like to order

Product name: Global Polysuccinimide (PSI) Market Growth 2026-2032

Product link: https://marketpublishers.com/r/P6A329624248EN.html

Price: US$ 3,660.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:
info@marketpublishers.com

Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page https://marketpublishers.com/r/P6A329624248EN.html
