The global Positron Emission Magnetic Resonance Imaging System (PET-MR) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Positron emission magnetic resonance imaging system (PET-MR) is the latest high-end molecular imaging equipment that combines positron emission tomography (PET) and magnetic resonance imaging (MR). It has the inspection functions of PET and MRI at the same time, and is not affected by respiratory movement, vascular pulsation, etc., and will not affect image quality. The inspection time is shorter than that required by PET and MRI alone, achieving the maximum complementarity of advantages, and has advantages over PET/CT in terms of soft tissue resolution and non-invasive inspection. The device has broad application prospects in the diagnosis and treatment of tumors, cardiovascular and nervous system diseases, especially for the early diagnosis and curative effect of brain tumors, upper abdominal tumors, pelvic tumors, pediatric tumors, cardiac function evaluation, bone and soft tissue diseases, etc. Evaluation and prognosis judgment will be more accurate.

United States market for Positron Emission Magnetic Resonance Imaging System (PET-MR) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
