The global Posterior Spinal Fixation System market size is predicted to grow from US\$ 4121 million in 2025 to US\$ 5523 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

A Posterior Spinal Fixation System is a medical device used in orthopedic and spinal surgery to stabilize and immobilize the spine. The system is designed to provide support to the posterior (back) aspect of the spine and is commonly used in the treatment of various spinal conditions, such as degenerative disc disease, spinal deformities, fractures, and spinal instability.

There is a continued emphasis on developing minimally invasive approaches to spinal surgery. Minimally invasive posterior spinal fixation techniques aim to reduce tissue damage, postoperative pain, and recovery time compared to traditional open procedures.
