The PPS Composite Separator for Alkaline Electrolyzer is based on polyphenylene sulfide (PPS) material. It's fabricated by hybridizing PPS with hydrophilic inorganic non - metallic oxides through methods like melt blending, solution blending, or surface welding, followed by weaving. This organic - inorganic hybrid separator features high strength, excellent corrosion resistance, and good ionic conductivity. It separates the anode and cathode in the alkaline electrolyzer, preventing the mixing of hydrogen and oxygen while allowing hydroxide ions to pass through. Thus, it effectively boosts the efficiency of water electrolysis and reduces energy consumption, being crucial for alkaline water electrolysis hydrogen production.
