## Abstracts

The global Pre-installed Electrical House market size is predicted to grow from US\$ 2064 million in 2025 to US\$ 3901 million in 2032; it is expected to grow at a CAGR of 9.7% from 2026 to 2032.

A pre-installed electrical house is a factory-assembled, modular electrical room with pre-installed equipment, wiring, and testing completed before delivery. It is commonly used in power systems, industrial parks, or construction projects, allowing for rapid on-site deployment and operation, featuring short construction cycles, easy installation, and high safety and reliability. The industrial chain of a Pre-installed Electrical House mainly includes upstream raw material supply and core equipment manufacturing, such as steel structures, switchgear, transformers, and distribution cabinets. The midstream consists of manufacturers or system integrators responsible for the design, assembly, and testing of modular electrical houses. Downstream, these units are applied in power systems, industrial parks, rail transit, and construction projects, where end-users or construction companies handle installation and operation. Additionally, maintenance and technical services are important components of the industrial chain.

The market for pre-installed electrical houses is driven by factors such as the industrialization of construction, accelerated urban infrastructure development, modernization of power systems, and increasing demand for short construction cycles, convenient installation, and high safety and reliability. Additionally, trends toward intelligent and digitalized power distribution further promote the adoption of modular electrical houses. However, the market also faces risks, including fluctuations in raw material prices, changes in policies and regulations, complexities in transportation and on-site installation, and potential compatibility issues due to non-uniform technical standards.
