The global Pu-erh Tea Extract market size is predicted to grow from US\$ 85.11 million in 2025 to US\$ 141 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

In 2025, the global production of Pu-erh tea extract was approximately 1,160 tons, with an average selling price of about US\$75 per kilogram. The production capacity in 2025 was 1,450 tons, with an average gross profit margin of approximately 20-30%. Pu-erh tea extract is the essence of the active components of Pu-erh tea obtained through processing and refining. It is usually a dark reddish-brown to blackish-brown powder, with its main components including tea polysaccharides, theaflavins, proteins, and thearubigins. It possesses various physiological activities such as promoting digestion, inhibiting bacteria, antioxidation, and improving gut health, and is often used as a food ingredient or a component in pharmaceuticals.

The upstream raw materials for Pu-erh tea extract mainly consist of Pu-erh ripe tea or Pu-erh raw tea processed from Yunnan large-leaf variety sun-dried green tea using specific processes; its downstream industry chain is widely applied in the fields of health products and functional foods, the beverage industry, and the cosmetics industry, and extends to pharmaceutical research and development (for the development and research of products related to metabolic syndrome).

Pu-erh tea extract, a traditional tea extract originating from Yunnan Province, China, has gained increasing attention from consumers in the global health product market in recent years. Due to its unique fermentation process and rich natural components, Pu-erh tea offers various health benefits, including promoting digestion, weight loss, antioxidant effects, and lowering blood lipids. With the rise of global trends in healthy eating and natural products, the market demand for Pu-erh tea extract has been steadily growing, particularly in the European, American, and Asian markets. The main

application areas of Pu-erh tea extract include health supplements, functional beverages, cosmetics, and food additives, playing a significant role in products focused on weight loss, anti-aging, and blood lipid regulation.

The market for Pu-erh tea extract is expected to continue expanding, driven by the demand for health products and natural foods, with market size projected to grow. As consumer preference for natural ingredients deepens, the awareness of Pu-erh tea extract in the global market is constantly increasing. However, the market also faces some challenges, such as fluctuations in raw material supply and changes in production costs. To address these challenges, companies need to strengthen R&D, continuously improve extraction technology and product quality to meet consumer demand for high-quality Pu-erh tea extract. Overall, Pu-erh tea extract, with its natural health benefits and broad application prospects, is expected to maintain strong market growth momentum in the coming years.
