The global Railway Track Geometry Measurement Equipment market size is predicted to grow from US\$ 3642 million in 2025 to US\$ 5307 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Railway Track Geometry Measurement Equipment ensures rail safety by engaging various measuring tools to record railway track geometry requirements. The system combines software and hardware components that derive track geometry parameters. It recognizes track geometry anomalies and records the trace data. Maintenance and construction decisions are taken by viewing and analyzing the recorded data. Accurate and reliable track geometry data is required for cost-effective construction, maintenance, and operational safety. With the help of various software, railway companies/operators can measure track geometry quickly and precisely and later view and analyze it to find any faults.

According to the data of China Association of Metros, by the end of 2022, 55 cities in mainland China have opened urban rail transit and 308 operating lines. The total length of operating lines is 10287.45 km, ranking first in the world and accounting for 26.2% of the total global mileage. 1080.63 km of new operating lines were added in 2022. By the end of 2022, 545 cities in 78 countries and regions will have opened urban rail transit, with more than 41,386.12 km of operational mileage. Compared to 2021, the total mileage of urban rail transit worldwide would increase by 4,531.92 km, an increase of 11.0%, of which 1,293.45 km of subway mileage, 788.11 km of light rail mileage and 2,450.36 km of tram mileage would increase, accounting for 28.5%, 17.4% and 54.1% of the total increase respectively.
