The global Red Peony Extract market size is predicted to grow from US\$ 94.50 million in 2025 to US\$ 133 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

In 2025, the global production of Red Peony Extract is approximately 4,600 tons, with an average selling price of about US\$21 per kilogram. The production capacity in 2025 is 5200 tons, with an average gross profit margin of approximately 20-30%. Red Peony Extract is an extract from the roots of the traditional Chinese medicine plant **Paeonia lactiflora**, mainly containing paeoniflorin, gallic acid, flavonoids, and volatile oils. It is a brownish-yellow powder with effects such as clearing heat and cooling the blood, promoting blood circulation and removing blood stasis, and relieving pain. It is widely used in anti-tumor, antihypertensive, analgesic, and anti-inflammatory applications, and is an important raw material for cosmetics and pharmaceuticals, requiring scientific formulation before use.

The upstream of the Red Peony Extract industry chain is centered on medicinal plant raw materials, mainly including cultivated or wild **Paeonia lactiflora** roots and rhizomes. The downstream application industries are concentrated and specialized, mainly serving modern traditional Chinese medicine and proprietary Chinese medicines (used in prescriptions for promoting blood circulation and removing blood stasis, and clearing heat and cooling the blood), health products and functional foods (targeting cardiovascular health, anti-inflammatory effects, and women's health), and cosmetics and skincare products (utilizing its antioxidant and whitening components).

Red peony extract, a traditional Chinese herbal extract, has been gaining increasing attention in the global market in recent years. Rich in active components such as paeoniflorin, flavonoids, and polysaccharides, red peony extract possesses various health benefits, including anti-inflammatory, analgesic, blood circulation-promoting, and

antioxidant properties. Its use in traditional Chinese medicine is long-standing, particularly in regulating menstruation, relieving pain, and improving blood health. With the rising global consumer demand for natural plant-based ingredients and health products, the market prospects for red peony extract are becoming increasingly promising, especially in health supplements, functional beverages, cosmetics, and traditional medicine products.

The market for red peony extract is expected to continue growing, particularly in the Asia-Pacific, European, and Middle Eastern markets. As health awareness increases and preferences for natural herbal products rise, the demand for red peony extract will gradually increase. In the health supplement sector, red peony extract is widely used in women's health, anti-aging, and immune-regulating products; while in the cosmetics industry, its antioxidant and anti-inflammatory effects make it a common ingredient in many high-end skincare products.

However, the red peony extract market also faces some challenges, mainly including the stability of raw material supply, fluctuations in production costs, and the strictness of relevant regulations. Overall, due to its natural and safe characteristics, red peony extract will occupy an increasingly important position in the global health and beauty market in the coming years.
