The global Resonant Devices market size is predicted to grow from US$ 969 million in 2025 to US$ 1601 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

The function of vibration is carried out by Linear Resonant Actuators. A linear resonant actuator is a vibration motor that produces an oscillating force across a single axis. Linear Resonant Actuators rely on AC Voltage to drive a voice coil pressed against a moving mass connected to a spring. Linear Resonant Actuators are used in most consumer electronic devices that are of the interactive nature and use notifications to alert the user. Some end devices using linear resonant actuators are Mobile Phone, fitness trackers and Tablets.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
