RSV mRNA Vaccine is an mRNA vaccine targeting Respiratory Syncytial Virus (RSV). RSV is a common respiratory virus that can cause cold-like symptoms and lower respiratory tract infections, particularly in infants, toddlers, and older adults. The RSV mRNA Vaccine utilizes mRNA technology to introduce mRNA sequences encoding RSV virus antigens into human cells, thereby inducing an immune response against RSV. This vaccine offers advantages such as high efficiency, safety, and ease of production, providing a new solution for preventing RSV infections. By administering the RSV mRNA Vaccine, the risk of RSV infection can be effectively reduced, related symptoms can be alleviated, and complications caused by RSV infections can be decreased.

United States market for RSV mRNA Vaccine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
