Salty wastewater evaporator is a kind of equipment specially used for treating salty wastewater. It separates the salt in the wastewater by evaporation crystallization or cooling crystallization to achieve wastewater reduction and resource utilization. The treatment process of salty wastewater evaporator usually includes pretreatment, evaporation and salt precipitation, condensed water deep treatment, and standard discharge or reuse. It has the characteristics of high efficiency, energy saving and environmental protection. It is suitable for treating various types and concentrations of salty wastewater, such as electroplating wastewater, printing and dyeing wastewater, papermaking wastewater, chemical wastewater, etc. These wastewaters usually contain high concentrations of salt and harmful substances. Through the treatment of evaporator, the wastewater can be discharged in accordance with the standard or resource utilization.
